

Individual Reflections

- What do I want to learn and understand better?

I want to learn and understand better Android studio because it is my first time of using Android studion and we are going to use it in our project, which is developing an Android app. This week I spent a lot of time to learn Android studio by watching different tutorials and reading about and also I asked questions from team members in our team who have worked before with Android to get better at it.

This week I have learned about how to connect fragments on an activity by using Android studion. I have lot more to learn and I will keep trying to learn it.

- How can I help someone else, or the entire team, to learn something new?

I think helping each other can make a team to learn new things and helping the team to go forward. This week I worked a lot with one team member because we have working on the same task. We tried to find the solution to our task and we both found the different solutions to solve our problem but with discussion to each other I found out that her solution is better than mine and we took it as our solution.

- What is my contribution towards the teams Use of Scrum?

In this week we talked a lot about how to priorities and write user stories and tasks that was not easy for me at first but now is much better. We decided to rotate the roll of Scrum master every week, this week we had chosen our scrum master and also product owner and I will be finished with my task.

- What is my contribution towards the teams deliveries?

I have contributed team deliveries by taking responsibility of quiz class with the other team member, we actually work a lot together. First sprint is about to add quiz activity, fragments and connecting fragments to each other by using button and moving. We will show it on the supervision on Monday.
