

## Individual Reflections - Week 5

### - What do I want to learn and understand better?

I want to learn and understand better Android Studio and get more comfortable on programming and also learning about how to save data on quiz activity. I need to read documents and watch tutorials and even get help from other IT students which have experience on saving data on Android.

### - How can I help someone else, or the entire team, to learn something new?

I tried to be present and active on every meeting and trying to help the team to aim our goal. I also helped with how to have a more efficient daily scrum meetings.

### - What is my contribution towards the teams Use of Scrum?

On Monday we chose a new Scrum master and we planed our daily meetings, we decided to have short daily scrum meetings which means that each member has 5 minutes to describe what she/he has done. We also planned our sprint review on details which could help us to know better what other group members has done and we used KPI (Well being, Velocity) to estimate team members stress and with using velocity estimate how many task each team member has done. I also helped with tasks.

### -What is my contribution towards the teams deliveries?

I contribute my teams deliveries by finishing the tasks I had responsible for as switching between fragments on question activity, layout design and complementary questions on quiz activity, which means that when the user answer the question by clicking on Yes/No button (it depends on question) it will show more question under this question.
