

## Individual reflection W4 – Alva

What do I want to learn or understand better?

I still want to understand Android studio in a more profound way so that I can feel confident in the programming part of the project. To do this I will ask for help when I get stuck and go through videos on youtube that handle that subject.

How can I help someone else, or the entire team, to learn something new?

The team is very qualified in the programming part of the course but I feel like I can contribute in the scrum part of the course, and also the reflections where I can deliver support and lead the group.

What is my contribution towards the team's use of Scrum?

I am not a scrum master this week so I just tried to support the scrum master when the communication didn't go as planned. I also tried to define the sprint and declare what was about to be done so that everyone had a clear view of what was expected.

What is my contribution towards the team's deliveries?

My contributions consisted mostly of finishing the design in Figma. This went well and I am really happy about the product we delivered. After that I started with the contacts in the app and it went fine, even though we needed help a few times, which we got.
