

What do I want to learn or understand better?

During this sprint I want to keep learning about development in Android Studio even though I feel a lot more comfortable with this development environment now. I also want to work more in the parts of our program that are not directly related to Android Studio to get a better understanding of how the whole project is coded and developed; for this I will focus more on the model part of our application during this next sprint, after I have worked quite a lot with the controller view part of our application in the passed sprints.

I also want to keep getting better at my role as a product owner, for this I will keep having my weekly meeting with our stakeholder but I will make sure to start making more comprehensible notes on what comes up during our meetings and I will also make sure of prioritising our user stories for future sprints after the group has expressed the need of it.

How can I help someone else, or the entire team, to learn something new?

This week I can collaborate mainly with one of the project members given that we are working on the same task. We have helped each other by sharing solutions to the problems we have encountered when programming and discussing together how to handle certain parts of the code.

What is my contribution towards the team's use of Scrum?

I continue with my role as product owner. During this sprint I had my weekly meeting with our stakeholder as well as an extra meeting with another doctor that is willing to give us feedback under the development process. During this meeting I got a better understanding of what our stakeholder is expecting for this sprint, as well as feedback on what we have done so far. Some of the questions that were brought up were for example: How would they want to see the data that we collect from the patient? Different graphs that work better for specific kinds of data and what is relevant to be shown from the professional perspective.

What is my contribution towards the team's deliveries?

This week I have continued working on the quiz, now this part is mostly done and we are focusing on being able to save the answers from our quiz. We have a demo to be shown and can start moving on to other parts of the application.

I have also contributed by continuing with my role as a stakeholder.
