

Individual Reflections - Week 2

- What do I want to learn and understand better?

I want to learn and understand better how to work in an agile team and how to be more efficient in my team and help them to achieve our goal which is developing an app. I want to learn how to work with an Android Studio. I also need to learn about Schizophrenia patients because it is going to help me to understand my target group better and can design a better UI which is possible to their behaviors.

- How can I help someone else, or the entire team, to learn something new?

I can help someone else in my team when I have knowledge about his/her question. I believe that helping each other can make a team to learn new things and helping the team to go forward.

- What is my contribution towards the team's Use of Scrum?

By trying to understand better how Scrum works. I will do my best to follow all sprints every week and do my job as best as I can to help my team.

- What is my contribution towards the team's deliveries?

I contributed with ideas and feedbacks about our mockup, description and business model. We also had a meeting with our Stakeholder today and we all asked questions about our project which was really helpful.
