

what do I want to learn or understand better?

This week we started coding more by ourselves which was challenging for me since i don't feel like I have enough coding experience to write on my own. This I want to acquire more knowledge in and I will work more next week on watching videos and try to understand more on how code is built.

how can I help someone else, or the entire team, to learn something new?

I feel like since I dont have as much experience with coding as the other ones in my team and that is basically what we done the whole week I havent been able to help anyone else learnt something this week. I will try to learn about the special part of the code that I am working on and then maybe I can forward this knowledge next week.

what is my contribution towards the team's use of Scrum?

We were struggling last week with our planning and the scrum part of the course. I feel like I can contribute with this and make sure that we are moving forward and maybe have a better layout of the tasks. Next week I will be scrum master where I hope I can contribute with my planning skills and help the learning of the team.

what is my contribution towards the team's deliveries?

I have been working on the contact page which we didn't really have time to finish but have got a better idea of how to do it. I hope by next week we will have it done and delivered by working a bit extra on that specific part since we now have a clear view on how to go forward.
