

What do I want to learn or understand better?

I want to learn about how different classes work. Also, I feel like I still can learn more about the coding. The thing I feel most insecure with is why some parts of the code belong in some classes and some parts belongs in others. I feel that it is hard with the communication between the code. Though I think that our friends from IT explains it to me in a very good way. They are very helpful so I feel that there is a progress in the running.

How can I help someone else, or the entire team, to learn something new?

I feel quite comfortable when working with XML, and that is something that I can help the others with. I also feel that I can challenge the others by asking questions when working together, and by that get them to develop in their programming skills.

I also feel that I can contribute with having more structure in our work. Al though it really have been better and is still developing in the right direction.

What is my contribution towards the teamís use of Scrum?

I have been attending the most of the daily scrum meetings and keeping up a good attitude. Trying my best to get everyone's opinion heard and keeping the meetings short and effective. I can improve in the work in Trello, and to next week attend all meetings.

What is my contribution towards the teamís deliveries?

This week I have helped Alva with the graphs. It worked better than we thought from the beginning but then we needed some help from Elias, who did a great job solving the rest of the code.
