

What do I want to learn or understand better?

This week I have been getting an even better understanding of how Android studio worked and the debugging function. I would like to understand the scrum work plan better and how it is used in reality. I would also like to get more insights in how user stories breakdown works in reality and how to do an efficient scrum board. To learn this we will discuss what we learnt in the course together and share our insights.

How can I help someone else, or the entire team, to learn something new?

By sharing my insights and reflections in the course so far I think me and the other team members will learn and get more knowledge about the scrum way of working. This will improve our comprehension and give us more experience on how it can work in the most efficient and productive way.

What is my contribution towards the team's use of Scrum?

This week I have been active during the team's meetings and contributed with ideas and input on how to design and solve things the best way possible. We had some discussion about how to best do the team reflection and realised there had been some miscommunication in how the reflection should be done in the most effective way. I contributed with my personal opinions and reflections and we came up with a solution and defined our method. I also came up with ideas on how to do the presentation which I think will be a good way of displaying the app.

What is my contribution towards the team's deliveries?

My contribution this week has mostly been in bug fixing and design layout. I think I delivered value to the customer by making the graphs easier to understand. Since this was the last week of coding there is not really anything to continue with on the code deliveries but I will contribute in the making of the presentation and final report.
