

Individual Reflection W1

What do I want to learn or understand better?

I'm new to Scrum, so I want to learn how to better plan around that model. It's also the first time I work in a group of this size, before there has always been fewer members, so learning how to divide the workload in an effective way in a larger group will be interesting. It's also the first time I work with students from other programs, so I'm sure there will be a lot of things to learn from each other since our experiences vary more than it has in my previous projects.

How can I help someone else, or the entire team, to learn something new?

Some members of the group are new to IT projects, so the members who have worked on it before can help with experience of past projects. For example using github was new to a few and two of us who have used it in the past tried having a meeting where we could help with getting it to work.

What is my contribution towards the team's use of Scrum?

I set up a digital notice board on Trello which will make it easier to keep track of things like what is already done, what needs to be done, and what is currently being worked on. We can still add more things to it, but this will make planning the project easier as you can get a quick overview. This will make it easier to set up goals and divide the workload for each sprint.

What is my contribution towards the team's deliveries?

We contributed with different ideas on what our projects would be, I think that my contributions mainly had to do with my past experiences with projects and how I structured and planned them then.
