

What do I want to learn or understand better?

At this point in the project I feel a lot more comfortable working with Android Studio as well as with my role as product owner, and even though I feel I have been able to practice my programming skills a lot, I have been mostly working with the quiz part of our application, for this final sprint I would want to get more involved in other parts of the application, I think this could help me to keep developing my programming.

How can I help someone else, or the entire team, to learn something new?

This week I had a problem with merging into master branch and I lost most of my changes from previous sprints but I managed to restore them, now I feel a lot more comfortable when using Git and maybe I could help other of we have troubles with this again.

What is my contribution towards the team's use of Scrum?

I continue with my role as product owner, this week I had my weekly meeting with the stake holder and got feedback, not much was added since we continue following the list I made last week together in consultation with our stake holder, for our prioritised user stories. In the beginning of the sprint I helped the team decided what was left to do for our prioritised user stories and what could be move to done.

What is my contribution towards the team's deliveries?

I merged the last changes to the quiz with the other member of the team that has been working on the quiz part of the app. The quiz is now completely done and I started to looking into how to export the answers, this last is not a prioritised user story but will be implemented depending on time.
