What do I want to learn or understand better?

This week I feel I haven't been so productive in terms of how much I get done in comparison to the time spent on a task. For this reason I want to improve my productivity, been able to the get more done in less time and not getting stuck on the same programming task without been able to move forward. For this I will try to structure my work better, planing ahead what will be needed and how the problems should been handled , I will also make a time estimation for the tasks I am currently working on and make sure I steak to it.

How can I help someone else, or the entire team, to learn something new?

I continue collaborating with Pegah, one of the teams members , in the quiz part of our application.We try to help each other to find the best solutions, this week for example I found some useful information on how to know which chip has been selected within a chip group, wick simplifies the job considerably when saving the quiz answers. We discuss this solution and decided to go with this.

What is my contribution towards the team's use of Scrum?

I continue with my role as product owner, been a link between the stake holder and the development team. I communicate to the rest of the group what the stake holder is expecting, which user stories should be prioritised and at the same time I get feedback from our stakeholder on the development of the app so far. This week I have spend some time prioritising the user stories and planing ahead for future sprints to be able to give the whole group a better picture of the final work we should deliver to the stake holder, as well for making it easier to prioritise what should be done first and what is the core functionality of the app.

What is my contribution towards the team's deliveries?

This week we were able to be completely done with the quiz layout after fixing some bugs we didn't realised were present on the code, we also made some improvements on our code because we realised our passed solution weren't the most effective ones. Now we have a working demo and we have starting working with saving the quiz answers. I have also contributed from my role as product owner helping the team decide which user stories should be prioritised, this week the team actually decided to change the work flow and pausing the work in certain parts of our application to focus on the user stories with higher priority.
