What do I want to learn or understand better?

This week I worked a lot on the different graphs in our app. I would like to understand how the graphs get connected with the other parts of the program better. I managed to create different graphs for different types of questions but I still don't quite understand how they get connected with the data from the answers. This I will look into further and be a part of when we connect every part of our code.

How can I help someone else, or the entire team, to learn something new?

Since I was really invested in how graphs work and how they are displayed, like the design part of them I believe I can pass this information on. We will have a sprint review on monday where we will show all of our code and then I will be able to show the others how it works.

What is my contribution towards the team's use of Scrum?

This week my contribution was that the agenda I created as scrum master last week still is being used. I think this is a good way to streamline meetings and I believe we will continue working after this agenda.

What is my contribution towards the team's deliveries?

This week I finished many tasks which was rewarding for me since I feel like I contributed to the app, coding wise. It was also a contribution to the teams delivieries and since I know have an understanding of how the graphs work I will be able to continue working with the tasks around them. The graphs are an important part of our app and adds a lot of value which means that it is a big contribution.
