What do I want to learn or understand better?

I want to understand how value formatter and simple dat works and how you can use them. I tried by myself to learn but I could not work it out so I will ask Elias who managed to fix it. There is some few fixes left which I hope I can develop together with elias to get a better understanding.

How can I help someone else, or the entire team, to learn something new?

This week I did not code very much since it was basically only three days of school with one day planning, so I don't think I helped someone learn anything this week.

What is my contribution towards the team's use of Scrum?

I was active during our scrum planning meeting which I think contributed to the teams use of scrum. Other than that, not much this week since it was a very short week, but I will contribute more next week. I made a checklist which will streamline the teams scrum planning meeting I think so that next week gets better.

What is my contribution towards the team's deliveries?

This week I had a lot of problems with the code and I couldn't really finish anything by myself, so I don't feel like I contributed that much to the deliveries. I did a checklist on what's left though so next week I will contribute more and also streamline the meetings.
