Individual Reflection W7

What do I want to learn or understand better?
I feel like I want to understand scrum better, it seems hard to break down certain parts into tasks of similar effort required to solve them. There are some things that I've learnt by hindsight, like that we could have planned and organized some parts of the code better, and we could've been earlier with peer reviewing code which would've prevented some current less than ideal parts which cause us problems.

How can I help someone else, or the entire team, to learn something new?
I've still been able to help others with merge conflicts and other general things in Android Studio. Other than that there hasn't been anything new.

What is my contribution towards the team's use of Scrum?
All the templates I created for the weekly documentations are still being used, and have not been changed, so I'd say that's a contribution which seems to have an effect throughout the project.

What is my contribution towards the team's deliveries?
This week I've felt kind of uninspired and have had a hard time coming up with what to write code-wise, making me rather inefficient. But I'll try my best to get going at a good pace next week so I can go at the pace I've been working at earlier weeks.
