Individual Reflection W5

What do I want to learn or understand better?
How to best present the data in a way that's both simple to understand, yet can give all information and have some options on what to show. There's many factors at times, so it currently seems like it can be quite a challenge to do in a way which is satisfying to use.

How can I help someone else, or the entire team, to learn something new?
I've managed to help cut down the time spent on meetings, it now feels like one of the main things we can do to make them even more effective would be for everyone to prepare more for the meetings we have. Me and Elias did some pair programming, which is helpful since both of us are new to making graphs with code. I can also still help with coding for the group members that are new to Android Studio and using Github.

What is my contribution towards the team's use of Scrum?
Since I was scrum master I had more responsibilities to prepare meetings and try to organize the group more. I also worked more on working on some documents before we did it as a group to try to get the meetings to be a bit faster, which seemed to work well. I'll also try to make some way of having the sprint reviews faster and easier to have a good overview of. The coding itself has worked fairly well, since we've tried to make a clearer priority order of user stories to implement it feels like we can ensure what gets done is more important.

What is my contribution towards the team's deliveries?
This week I was scrum master, so I tried to work on all the things we tried to improve for the role from the first week, which was more responsibilities. I've spent significantly more time planning and doing things outside the coding this week, as many in the group felt that meetings had previously been inefficient. The meetings did end up shorter while still getting as much done, which should've left more time to work on other things for the other members. I've also made sure
