Individual Reflection W4

What do I want to learn or understand better?
As it seems like I'm going to be the next scrum master I want to better understand how to better organize the group so we're all better coordinated in our work. I want to learn how to better break down user stories into smaller parts and divide them into smaller, well defined tasks.

How can I help someone else, or the entire team, to learn something new?
I will propose that those who still feel new and unfamiliar with android studio can work with the team members that have used it before instead of each other, I think there's more to learn for someone who's new when working with someone with previous experience of the IDE we're using rather than working with other members who's also new to it. I think I will still be able to help with using Github Desktop if there's any problems, such as merge conflicts, etc.

What is my contribution towards the team's use of Scrum?
I've had discussions with the current scrum master on how things are currently working on what we can improve for our next sprint. We've taken note on what things have worked well, and what needs to be worked on. Some things that need to be improved upon are: being clearer on when meetings are and who can and cannot attend beforehand, making sure everyone takes a more active part in updating our notice board on Trello, and being clear on how we can work better on things outside the coding itself such as Team Reflection for example.

What is my contribution towards the team's deliveries?
I have been one of the more active members in breaking user stories and making tasks. I've been trying to be available in helping other group members in their coding if help is needed as some are still new to Android Studio and using git. Worked together with Elias to make sure that documents followed instructions properly and were delivered on time.
